

Early Journal Content on JSTOR, Free to Anyone in the World

This article is one of nearly 500,000 scholarly works digitized and made freely available to everyone in the world by JSTOR.

Known as the Early Journal Content, this set of works include research articles, news, letters, and other writings published in more than 200 of the oldest leading academic journals. The works date from the mid-seventeenth to the early twentieth centuries.

We encourage people to read and share the Early Journal Content openly and to tell others that this resource exists. People may post this content online or redistribute in any way for non-commercial purposes.

JSTOR is a digital library of academic journals, books, and primary source objects. JSTOR helps people discover, use, and build upon a wide range of content through a powerful research and teaching platform, and preserves this content for future generations. JSTOR is part of ITHAKA, a not-for-profit organization that also includes Ithaka S+R and Portico. For more information about JSTOR, please contact support@jstor.org.

V. *A Letter from Dr. Wallis to Dr. Sloan, Secretary to the Royal Society, concerning some supposed Alteration of the Meridian Line ; which may affect the Declination of the Magnetical Needle, and the Poles Elevation.*

Oxford, June 21. 1699.

S I R,

I Received (two days since) a Letter (to me directed) from an unknown Person (without any name Subscribed, or mention of the Place from whence,) containing a Suggestion about some *Variation* of the *Meridian Line*, (which, if so, may consequently affect the variation of the *Magnetick Needle*, and the Elevation of the *Pole*,) which he desires may be Communicated ; and is *Verbatim*, as followeth,

“ For the Reverend Dr. *John Wallis* Geometry Pro-
 “ fessor in *Oxford*, these, *June 12, 99*. Sir, This comes
 “ from one who is no stranger to your Abilities, though
 “ unknown to your Person ; however I presume on a
 “ Minute of your Leisure, without any further Apo-
 “ logy, than that I hope it may tend to promote a
 “ Point of Learning. Upon Reading the *Philosophical*
 “ *Transaction*, Num. 241. And as I was wondering how
 “ an ordinary *Mathematician* could miss so easy a thing
 “ as the drawing a true *Meridian*, I hit upon a Thought,
 “ that *Meridians* must needs vary ; but whether in such
 “ manner, and proportion, as appears in the Instance
 “ of that *Transaction*, I am not able to determine :
 “ Having contented my self with such skill in Astrono-
 “ my as serves only to contemplate the wonderful Fa-
 “ brick of the visible Heavens, without adding so much
 “ Geome-

“ Geometry and Arithmetick, as are needful for making Calculations. What I would offer, is this, Taking
 “ for granted that the Earth moves, &c. You know, that besides the Diurnal and Annual Revolutions,
 “ there must also be a Third, to account for that slow
 “ Motion of the fixed Stars; upon the *Poles* of the
 “ Ecliptick, in about 25000 Years; which is solved by
 “ the direction of the Earth’s Axis from one Point to
 “ another of the Polar Circle. And that direction being
 “ nothing but a certain wobble in the Earth’s Motion,
 “ must needs make the Noon-shade of a Perpendicular
 “ not lye always in the same Line. I would request,
 “ that this hint might be improved in one of the next
 “ *Transactions*, if I were sure that it were not
 “ a Blunder. But if so, I have this to excuse, that I
 “ have not made it tedious. *I am, Sir, your most*
 “ *humble Servant.*

Now, this being a new Suggestion, and which (if well grounded) may be of considerable consequence (both as to the Declination of the *Magnetick Needle*, and the *Poles* Elevation,) and therefore deserving to be well considered: And, it not being very probable, that so careful a Man as *Ticho*, and those concerned in the Church of *St. Petronio* (mentioned in the *Transactions*, *Num.* 241.) should be so much mistaken in the *Meridian Line*: I thought fit to recommend it (as is desired) to your consideration, and (thereby) to the Thoughts of others. But, if there be ought of this nature; it must arise from a change of the *Terrestrial Poles* (here on Earth) of the Earths Diurnal Motion; (not of their pointing to this or that of the fixed Stars:) For, if the Poles of this Diurnal Motion remain fixed to the same place on the Earth; the Meridians (which pass through these Poles) must remain the same.

Your Humble Servant,

John Wallis.

VI. *An.*
